

Video Presentation Reflective Response

Your Name, Today's Date: Nolan Trinh. October 13, 2021.

Title or Topic: Paper Essay on the Machine that Changed the World Pt.1

Three things you learned from this video:

- The vacuum tube was the foundation of the new electronic industry, which were previously used in radios. It took a couple of years to know that they were unreliable since they would burn out.
- A program can be loaded onto a floppy disk and used for on a personal computer.
- A scientist believed was built as friendly as possible, scientists would be interested in them. New scientists discovered that computers helped to answer questions never before answered. The data has helped answer questions about

Were any of the ideas new or did they cause you to think about some topic differently than you had before? What, if anything, did the video or presentation do for you? Explain.

-The thought that the computer came from principles of calculus did affect me much. I previously had not known that Babbage would go with this method in order to push for algorithms. On a side note, the idea that computers could be used by many other usages sparked much of an inquiry. As this means that the people may use it for more of their daily life usages. This also meant that everyone would have an equal chance on using the computer, and bringing back gains to themselves that would be much harder to get had they not have one.

Things that seemed confusing, incomplete, or piqued your interest:

The concept of making a computer had made the most out of my interest. It started from the making of the parts of the computer, to the people who were working behind to make sure everything went well to planned. Then the idea that computers were one day would be made for public usage was much of interest as well.
